

About DareAI Search

At DareAI Search, we are building the future of AI-driven search visibility by helping brands get discovered, cited, and recommended across AI-powered platforms like ChatGPT, Gemini, Perplexity, and Copilot. As an AI Search Optimization and Generative Engine Optimization (GEO) platform, we focus on redefining how brands grow in the evolving AI-first digital ecosystem.

Founded by the team behind Digidarts, a leading 360° full-funnel Performance Marketing Agency, DareAI Search combines years of expertise in SEO, performance marketing, and digital innovation with advanced AI-search strategies. Our mission is to help businesses stay ahead by optimizing their presence for the next generation of search experiences.

At DareAI Search, we value Innovation, Growth, Collaboration, and Continuous Learning. We foster a dynamic work culture that encourages creativity, ownership, and professional development through hands-on exposure, learning opportunities, and a fast-paced startup environment.

Joining DareAI Search means becoming a part of a forward-thinking team that is shaping the future of AI-powered discovery and digital growth.

About The Role

We're looking for a Front-End Developer who builds interfaces that stay fast, reliable and accessible under real-world conditions: slow networks, failed requests, large data and every kind of user.

What You'll Do:

- Build and maintain responsive, production-grade web interfaces.
- Integrate with backend APIs, handling loading, error and edge cases gracefully.
- Own frontend performance, accessibility and state management.
- Write tests for critical user flows and review teammates' code.
- Work closely with backend developers, designers and product to ship features end to end.

What we're looking for:

- Strong JavaScript/TypeScript, HTML and CSS fundamentals.
- Hands-on experience with at least one modern framework (React, Vue, Angular, Svelte or similar).
- Solid grasp of async data fetching, caching and client-side state.
- Working knowledge of web accessibility and performance optimisation.
- Comfort with Git, code reviews and deploying to cloud platforms.

Nice to have:

- Experience with offline-first apps, optimistic UI or real-time features.
- Familiarity with testing tools such as Jest, Vitest, Cypress or Playwright.
- Experience with Supabase, Firebase or similar backend services.

Join us and write the future of Digital Marketing.
